Organic Gem™ will*

Increase a plant's resistance to pests, disease, and stress from heat or drought.

Restore and replenish overworked soil through increased microbial activity.

Reduce leaching of nutrients from the soil.

Produce healthier plants, greater bloom in flowers, and average 20% increase in yields.

Break down the hull of grass seed, causing the seed to germinate faster.

Repel deer.

** as reported by Organic Gem™ customers and university studies*

Organic Gem™ is

Safe for both children and pets, and will not pollute the water supply.

Proven in university testing and field trials

Shelf stable for at least 5 years.

Enzymatically Digested, with High Oil Content.

Rich in over 40 trace minerals and 17 amino acids.

Organic Gem™

Application Instructions:

Foliar Applications:

Dilute one (1) gallon **Organic Gem™** to 30-50 gallons of water. Spray after sunset or in the coolest part of the day. Use 3-5 gallons of **Organic Gem™** (before) dilution) per acre to achieve proper coverage.

Lawn Applications:

Lawn applications should be at a dilution rate of between 30:1 (4oz/gal.) and 50:1 (2.5oz/gal).

One (1) gallon of **Organic Gem™** covers approx. ¼ of an acre.

Soil Applications:

Minimum dilution rate in one (1) part **Organic Gem™** to 15-20 parts water, sprayed or side-dressed with seed.

Average application rate is 15 gallons of **Organic Gem™** per acre, per season.

Seedlings or Transplants:

Dip in a solution of four (4) oz. **Organic Gem™** to one (1) gallon of water, then plant and backfill hole with soil.

Can also stop-water with same solution.

Trees, Shrubs and Ornamentals:

Use 8 oz. of **Organic Gem™** per gallon of water. Feed by boring 1" holes, 8" to 12" deep, around the drip line of the plant (holes should be 1ft or 2ft apart).

Fill holes with solution, 2-3 times per season.

Compost Starter: Use 4 oz. of **Organic Gem™** per gallon of water. Mix into compost one a week, or whenever additional material is added to compost.

*** MIX WELL BEFORE USE**

*** DO NOT STORE IN DILUTED FORM**

Organic Gem™ *will cut your costs...*

Tests have shown that by using **Organic Gem™** normal fertilizer application decreases by 25-50%

Microbe population before*

100 liter drum and 4 liter gallon

Available in:

- 10L Jugs
- 4L Gallon
- 100L Drums
- 1,040L Totes

1,040 liter tote

Organic Gem™ *will increase plant and soil health ...*

“Organic Gem™ supports a very rich and diverse community of microbial life. This is important because when each gram soil in an acre of land supports protozoa numbers on the order of 20,000 per gram of soil matter, 400 pounds of nitrogen per acre per year is released as they feed on bacteria.”

- Dr. Elaine Ingham

There is no petrochemical fertilizer that can do this!

Microbe population 48 hours after application of **Organic Gem™** *

A photograph of a variety of fresh produce including yellow squash, red tomatoes, green bell peppers, and a woven basket filled with vegetables. To the left is a burlap sack with the word "RICE" printed on it. The background is a lush green field.

Organic Gem™ can be applied
universally
depending
on your
needs....

Organic Gem™

Is made from wild-caught ocean fish!

It uses whole fish not just fish racks.

***Organic Gem™** has the highest oil and fish mineral content of any fish fertilizer in the market.*

*University trials show **Organic Gem™** not to leach from the soil.*

Organic Gem™ enhances the microbial activity of the soil, allowing for:

- Better penetration of water and nutrients.
- Deeper root development.
- Healthier, more vigorous plants.
- Better water holding capacity of the soil.
- Effective on **ALL** plants

What makes **Organic Gem™** so good?

**Organic Gem™ is cold-processed,
enzymatic fresh fish
fertilizer/hydrolysate that also
works as an all-natural
bio-stimulant.**

Organic Gem™ is different from anything else on the market due to both the raw material source and a unique processing method

Organic Gem™ is the by-product of nutraceutical processing of cape shark. The shark skeleton, made up entirely of cartilage, 30% mucopolysacchrides, 7-8% of which ends up in **Organic Gem™**.

The unique manufacturing process of **Organic Gem™** produces un-denatured fish proteins. This means that **Organic Gem™** is a SUPERIOR feed for soil microbes, and unlike fish emulsions, will work as an excellent feed for beneficial bacteria and fungi.
